Subject: Fish Consumption Advisories

Phone conversation with Dr. Gary Buchanan, of the NJDEP Division of Science Research and Technology (609-633-8457) regarding the fish consumption advisories regarding dioxin contamination and the Hackensack River.

Dr. Buchanan stated that the fish consumption advisories for Blue Crab and Striped Bass are specifically based on dioxin data while the advisories for American eel, white perch, and white catfish are based on PCB data. Data collected for the Newark Bay complex includes dioxin data collected in the Newark Bay, the Passaic River and the Hackensack River.
